## Create a Map: How to create a Map

Step 1: Press the Create Map Button, located in the main menu.

You will have the option to load a saved map or create a new map. You may press cancel to return to the main menu. Depending on whether you wish to load a map or create a new map, you will need to follow Step 2. a) or Step 2. b) respectively.

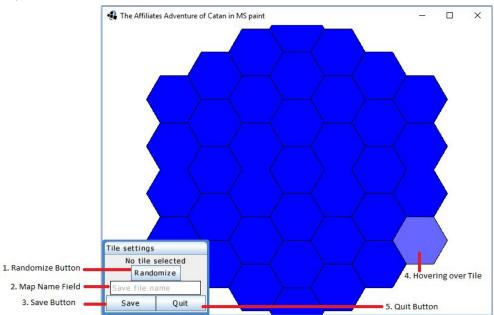

<u>Step 2. a)</u> To load a map, press the **Load Map** checkbox (1), and select a new map from the list of maps (2). You will have the option to delete the map (3). Once you have chosen a map, press the **Confirm** button (5). You will then be taken to the Map Screen (Step 3).

Made using MS Paint

<u>Step 2. b.</u> To create a new Map, enter how many levels, corresponding to the radius of the Map (4), and press the **Confirm** button (5). You must enter a number between 4 and 9. You will be taken to the Map Screen (Step 3).

Step 3: Use the cursor to select a tile (4) in order to customize it.

\*If you chose to load a map, this screen will instead hold the loaded map.

Pressing the Randomize Button (1) will generate a randomized map. To save the Map, the name of the map should be entered into the Map Name Field

1. Selected Tile

2. Tile Type
3. Roll Number

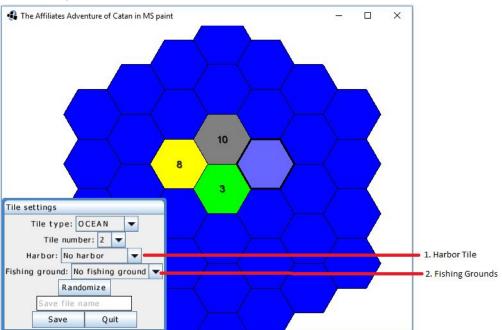

Randomize
Save Quit

Step 4: Once the tile is selected (1), select the tile type (2) and the tile number (2).

For a list of all available Tiles, see **Tile Guide**.

Made using MS Paint

<u>Step 5</u>: Ocean tiles adjacent to non-ocean tiles can receive either a Harbor (1), if they are adjacent to one or more land tiles, or a fishing grounds (2) if adjacent to two or more land tiles. Additionally, there is a choice between a Generic Harbor and a Special Harbor.

<sup>\*</sup> A harbor or a fishing grounds can be constructed.

<u>Step 6</u>: Save the Map using the Save Button and press the Quit Button to return to the main menu. Note: in order to save, the map must be valid. A valid map contains

# **Starting the Server**:

To start the server, locate the "index.js" file situated in the "server" folder of the project. Then navigate to that folder from the command line and type the command "node index.js". Note that in order to successfully launch the server, node.js and socket.io must be installed on your computer.

Made using MS Paint

## **Starting a Game**: How to create or load a game

Step 1: Select a profile and press the **Connect** button to connect to the server.

<u>Step 2: a)</u> To create a New Game, set the Number of players in the Number of Players field (5) from a minimum of 2 players to a maximum of 5 players. The map can be chosen from the List of Maps (8). A password can be set in the Password Field (6). You also need to specify the number of victory points for the game (7), between 6 and 18. Finally, press the Confirm Button to Create the Game.

Made using MS Paint

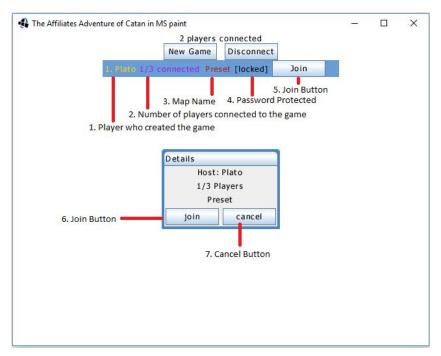

<u>Step 2: b)</u> To Load a Game, select the Saved Game Checkbox (3) and select a Saved Game in the Saved Game list (4). Press the **Confirm** Button (9), and you will then be asked to choose which player to join as.

Once all the players have joined the game, the game will be launched automatically.
